

Thanks for purchasing the New Timewise Repair Volu-firm Set! It is easy to use and the products are listed in the order of use. Enjoy!

Volu-Firm Foaming Cleanser -Contains Sunflower Seed Oil. I suggest applying a small amount of this Cleanser to clean wet hands and then applying to face. It will foam-up. ATE: 2.5 MONTHS WHEN USED TWICE A DAY

Volu-Firm™ Lifting Serum

This sleek bottle offers the same easy product delivery. Pull off the cap, PRESS the top to prime the airless pump and dispense the product to your fingertips! One pump, delivers all you need for an application for face and neck!

Volu-Firm™ Night Treatment with Retinol and Volu-Firm™ Day Cream Sunscreen Broad Spectrum Simply pull off the frosted pink cap, place your fingers in the indented areas on top of the jar and PRESS a few times to prime the airless pump. The product will be dispensed into the small receptacle on top. There's no need to twist off the top and dip into the product – it will be delivered right to your fingertips! One pump delivers enough for face and neck.

Volu-Firm Eye Renewal Cream is a more advanced firming eye cream that targets deep lines wrinkles and puffiness under eyes. There is a special metal applicator/massager. You can use this product over the entire eyelid as it works on sagginess, under eye bags and crepiness of the eyelids and dark circles and dry skin. You also want to apply it under the eye as well. It also features a unique liquid crystal delivery system chosen because liquid crystals are structurally similar to the skin barrier, potentially helping skin be more receptive to the product's benefits. The custom applicator is perfectly sculpted to fit the eye shape. The zamac metal tip helps stimulate microcirculation as it gently massages the under eye area to help reduce puffiness. The special cool metal massages lid and under eye. Be sure to turn to the rounded side of the applicator to massage. Apply 1 squirt to each eye. **The medal ball is: ZAMAC (a combination of Zinc, Aluminum, Magnesium and Copper) This metal is used in a tool called Enswell, sometimes called an Eye Iron, Endswell, Endswell, Stop-swell or No-swell used in the sport of Boxing.** It is a small smooth piece of thick metal. It is kept in the ice bucket and is used to cool the area of a bruise or a cut by applying direct pressure to decrease the blood flow to the area. The idea being that the cold will cause capillaries to constrict and reduce the flow of blood to the swelling. AVERAGE USE UP Rate 2.5 MONTHS.
